

SPUMP PROJECT DUE DILIGENCE OVERVIEW

Scotty Pumpkin (SPUMP) - Exchange Listing Support Document

Project name	Scotty Pumpkin
Ticker	SPUMP
Network	Solana
Token standard	SPL token
Primary use	Web3 commerce, marketplace payments, shop creator, creator tools
Website	https://scottypumpkin.com
X / social	https://x.com/SpumpCoin
Administrative entity	SAS Association Familiale Fin (AFFIN), Europe
Listing request	Direct listing / spot market consideration

1. Executive Summary

SPUMP is a Solana-based Web3 commerce and community token connected to the Scotty Pumpkin ecosystem. The project is designed to support marketplace selling, online shop creation, creator commerce, digital products, NFTs, classified advertising, and token-enabled payment functionality. The objective is to combine familiar Web2 selling tools with Web3 token utility in a practical digital commerce environment.

2. Project Purpose

The project aims to provide a commerce layer where users, creators, private sellers, and businesses can create shops, list products or services, promote offers, and participate in marketplace activity. SPUMP is positioned as the ecosystem utility token for access, payment, community, and commercial interaction features.

3. Core Ecosystem Components

The ecosystem includes: SPUMP Marketplace for buying and selling goods, services, digital products and NFTs; SPUMP Shop Creator for online shop creation; creator commerce tools for artists, content creators and digital sellers; classified advertising for private and business listings; and community/social features intended to connect buyers, sellers and creators.

4. Token Utility

SPUMP utility may include marketplace payments, access to ecosystem features, creator support, digital goods interaction, NFT-related activity, promotional features, and participation in Web3 commerce flows. Utility availability may vary by platform, jurisdiction, exchange support, and future technical integrations.

5. Blockchain and Technical Position

SPUMP is issued as an SPL token on the Solana blockchain. Solana was selected for low-cost, fast-settlement token transfers and compatibility with existing DEX, wallet, and Web3 infrastructure. SPUMP is not a separate Layer-1 blockchain and should not be classified as a stablecoin.

6. Market and Listing Status

SPUMP is active within decentralized exchange infrastructure and seeks centralized exchange collaboration for wider accessibility, improved market visibility, and simplified user access. The preferred listing route is a direct spot listing. The project does not request derivatives, leverage, or futures products at this stage.

7. Token Category Positioning

Recommended categories: Dapp, Currency, NFT, Consumer, Payment, Marketplace, Social Commerce. Not recommended: Stablecoin, Public Chain L1/L2, Lending/Yield, Derivatives, Insurance, Gambling, or Privacy token.

8. Compliance and Risk Statement

SPUMP is presented as a utility-focused digital asset for ecosystem use. It does not represent equity, debt, ownership rights, dividends, guaranteed income, or a promise of financial return. Digital assets are volatile and users may lose part or all of their value. Availability of features may be restricted depending on local laws, platform policies, and exchange requirements.

9. Audit and Security Status

No independent smart contract audit is currently claimed in this due diligence summary. SPUMP is an SPL token on Solana and the project may provide additional technical, contract, metadata, authority, or security documentation upon request. If a third-party audit is completed in the future, the updated audit report can be supplied separately.

10. Administration and Contact

Project administration is linked to SAS Association Familiale Fin (AFFIN), Europe. Public project information is available through the official website and X account. Further due diligence materials, company documents, token details, and ecosystem documentation may be provided to exchange listing teams upon request.

11. Due Diligence Checklist

Item	Status	Comment
Website	Available	Official project site provided.
Social channel	Available	X account provided.
Blockchain	Available	Solana SPL token.
DEX presence	Available	Project indicates existing DEX availability.
Whitepaper / Litepaper	Available / to upload	Use SPUMP whitepaper or MiCA-style litepaper where requested.
MiCA whitepaper	If available	Upload the MiCA-style whitepaper where the form requests it.
Independent audit	Not claimed	No external audit is claimed in this document.
Listing type	Direct listing	Spot listing route recommended.
